

Hong Gildong

Backend Engineer | Seoul, Republic of Korea | sample.devpick.kr@example.com

SUMMARY

Backend engineer focusing on scalable APIs and reliable operations. Comfortable owning features end-to-end: design discussions, implementation, tests, rollout, and on-call support. Interested in pragmatic architecture, observable systems, and improving team throughput through sensible automation and documentation.

SKILLS

Java, Spring Boot, Spring WebFlux (basics), JPA, QueryDSL, PostgreSQL, Redis, Kafka (basics), Docker, AWS ECS, GitHub Actions, OpenAPI, JUnit, Grafana, Prometheus, REST, gRPC (basics).

EXPERIENCE

DevPick Labs — Backend Engineer — 2022-03 ~ Present — Seoul

Built and operated core commerce APIs handling peak traffic during campaign windows. Reduced p95 latency for the checkout aggregation path by profiling DB queries and introducing targeted caches with explicit TTL policies and stampedes protections. Improved incident response by aligning runbooks, adding SLO dashboards, and running lightweight game days quarterly. Collaborated with frontend engineers on API contracts via OpenAPI; participated in production deployments behind feature flags.

Acme Payments — Junior Backend Engineer — 2020-01 ~ 2022-02 — Seoul

Maintained ledger microservice integrations and hardened idempotency for webhook ingestion. Worked on Postgres schema migrations under dual-write constraints and incremental validation. Automated repeatable operations using internal CLI tools.

PROJECTS

Fleet Dispatch Simulator — Hackathon Winner

Team backend lead for a weekend hackathon prototype: routing engine API, Postgres storage, Redis for ephemeral assignment locks, seeded demo datasets, Grafana dashboard for mocked throughput. Role: architecture sketch, REST API definition, pairing on integration tests.

Personal: Study Log API

Small side project exporting weekly study summaries (Markdown). Spring Boot backend, Postgres, deployed container image to a hobby VPS. Goal was to practice repeatable CI and minimal infra.

EDUCATION

Bachelor of Science in Computer Engineering — Example National University — 2016 ~ 2020.
